Writing.

1. The quote "the best teachers are those who show you where to look but don't tell you what to see" encapsulates the essence of effective teaching. A truly great teacher acts as a guide, illuminating paths of discovery rather than imposing their own interpretations on students. (Great teachers help us find our way, but they allow us to make)

(When teacher guide us without giving all the answers, it encourages us to think ^{for} ourselves. For example, in

a) Firstly, a teacher who guides students on where to look helps them develop essential research skills. For instance, by suggesting various resources such as books, articles, or websites, they empower students to seek information independently. This approach cultivates a sense of ownership over one's learning process, making education more meaningful and personal.

ii. In science classes, teachers can encourage curiosity by letting students conduct experiments. Instead of explaining every detail, they might suggest a question to investigate. Students then explore and find answers on their own. This hands-on approach helps us to understand concepts better and makes learning more exciting. Moreover, when teachers allow us to explore, we feel more confident in our abilities. We learn that it is okay to make mistakes and that these mistakes are part of the learning process. This builds resilience and creativity, which are important skills for our future.

In conclusion, the best teachers guide us in our learning journey without limiting our vision. They encourage us to look for answers ourselves and help us develop critical thinking skills. By doing this, they prepare us not just for exams, but for life. Great teachers inspire us to be curious and independent learners.
